

Simplifying IAM Migration and Implementation Planning

Happiest People. Happiest Customers

ABSTRACT

The purpose of this whitepaper is to provide a comprehensive overview on Identity and Access Management (IAM) program and how Happiest Minds Technologies helps simplify the IAM Migration, Implementation and Planning.

OVERVIEW

In recent times, the dependency that technology has created in the world of Enterprise is enormous and continuously growing. Constant Innovation and Invention in the technology world with the increased demand in cloud, mobile and social has been pushing organisations to change their contemporary ways and migrate the old solutions to adopt the new ways or re-engineer the entire solution with an entirely new solutions (product).

However, in this entire process of constant changes, it becomes very difficult for companies to manage their assets and its accessibility to the right individuals with granted entitlements. Organisations need mechanisms by which they can

digitally identify individuals, assign privileges, monitors accesses, the usage of data and segregation of duties. The system should also have the ability to provide an end-to-end analysis on the entire infrastructure helping organisations to move faster and more seamlessly.

Identity and Access Management (IAM) thus becomes the need of the hour. IAM solutions helps Enterprises manage their employees (and contractors) lifecycle, access control and self-service functionalities. These set of defined business processes and supporting technologies facilitates the creation, maintenance and the use of digital identity of employees in an organisations.

Why does your company need **Identity and Access Management?**

To keep up pace with the competitors, enterprises have to perform faster and better. Which means arranging immediate and secure access to employees, partners, and clients based on their requirements and locations. Identity and Access Management solutions is built to serve the IT team to manage the entire control, security and compliance without any major issues.

IAM provides access of having multiple application on a device, from anywhere in a single cloud based management system. Which means the minute an employee joins the company, he/she has access to all their apps and systems and the minute an employee quits the job, all the access are intercepted.

Happiest Minds' Play in Simplifying IAM Implementations

Happiest Minds Technologies Security Identity and Access Management service delivers high value based capabilities that enable the lifecycle management of quality IT services focusing on people, process and technology and simplifying the migration journey for the organisations.

The Migration & Architecture Planning engagement is designed to provide the enterprise, industry best recommended practices for its IAM business requirements. Architecture plans or recommendations are outlined in a report that provides critical insight into the recommended technical approach for its environment. Happiest Minds' [IAM](#) services includes:

Here are the 5 simple steps to an efficient delivery framework and a process that guarantees a cost-effective IAM solution.

Delivery Methodology & Processes

1 Requirement Analysis

Information Gathering
And Scope Definition

Design Phase

2

Architecture and
Solution Design

3 Development / Migration

IAM setup and
Integration Testing

Production Roll-out

4

Migration from UAT to
Production, Go-Live

5 Support & Maintenance

Training, Post-production Support,
Enhancement

How it works

Happiest Minds' Identity and Access Management (IAM) Security practice will help enterprises plan for a new technology deployment by establishing a conceptual design and migration plan by envisioning and planning the technical approach. We have expertise with almost all IAM product available in the market. Having said that, we have our own IP product in the IAM space "IdentityVigil", a next generation identity and access analytics driven [IAM solution](#), both available on premise and as a SaaS based model.

In case the enterprise already has an IAM solution and due to various reasons or demands they are looking for a new solution, Happiest Minds can simplify their migration journey and develop a new roadmap for their IAM strategies and implementations.

Ongoing knowledge transfer will occur throughout the engagement process and help you prepare, create and deploy a successful and supported service. The Architecture & Migration Planning will provide the enterprise with technical guidance for migrations and implementations of Identity and Access Services.

Benefits and Results

Quicker onboarding of applications using Innovative Factory Model

1

Partnership and Experience in working with IAM Vendors

2

Templatized Deliverables and Artifacts for IAM solution rollout

3

4

Quicker ROI & business user satisfaction

5

6

Experienced team of professionals and Center of Excellence

Quick product evaluation and PoC

7

8

Strategically IAM road map designing and planning

Guidance on migration strategy /implementation of the service to properly deploy your environment

Decreases risks when significantly changing IAM architecture designs

9
